Sensors and Actuators A 44 (1994) 267–269

SENSORS AND ACTUATORS A PHYSICAL

Subject Index of Volume 44

Accelerometers
a linear electromagnetic accelerometer, 103
Acoustic wave microsensors
acoustic wave liquid-phase-based microsensors, 199
Acoustic waves
real-time measurement of mass accumulation on filters using acoustic-wave techniques, 45
acoustic wave biosensors, 167
acoustic wave thermal sensitivity: temperature sensors and temperature compensation in microsensors, 177
integrated-circuit-compatible design and technology of acoustic-wave-based microsensors, 249
Adhesive force distribution
adhesive force distribution on microstructures investigated by an atomic force microscope, 153
Alternating direction method
full additive drift elimination in vector sensors using the alternating direction method (ADM), 13
Atomic force microscopes
adhesive force distribution on microstructures investigated by an atomic force microscope, 153
Automated testing system
an automated SAW gas sensor testing system, 219

Biosensors
acoustic wave biosensors, 167

Cantilevers
micromechanical cantilever resonators with integrated optical interrogation, 71
Chemical grafting
lubrication of silicon micromechanisms by chemical grafting of long-chain molecules, 77
Civil-engineering structures
low-coherence deformation sensors for the monitoring of civil-engineering structures, 125
C-mode imaging
characteristics of interdigital transducers for mechanical sensing and non-destructive testing, 241
Color sensors
numerical simulation of a p–n–p–n color sensor for simultaneous color detection, 119
Compensation
a linearisation and compensation method for integrated sensors, 95

Deformation sensors
low-coherence deformation sensors for the monitoring of civil-engineering structures, 125
Delay-line oscillator
characteristics of interdigital transducers for mechanical sensing and non-destructive testing, 241
Die-mount materials
finite-element analysis of thermal stresses in a silicon pressure sensor for various die-mount materials, 145
Drift elimination
full additive drift elimination in vector sensors using the alternating direction method (ADM), 13

Electrostatic deflection
electrostatically deflectable polysilicon torsional mirrors, 83

Fiber-optic sensors
a fiber-optic high-temperature sensor, 19
Finite-element analysis
finite-element analysis of thermal stresses in a silicon pressure sensor for various die-mount materials, 145
Flow sensors
flow sensors based on surface acoustic waves, 191

Gallium arsenide
applicability of Ta/GaAs Schottky photodiodes prepared by ion-assisted processes, 51
Gravimetric sensors
real-time measurement of mass accumulation on filters using acoustic-wave techniques, 45

High-pressure transducers
metrological characteristics of some strain-gauge high-pressure transducers, 65
High-temperature sensors
a fiber-optic high-temperature sensor, 19

Image sensors
random addressable CMOS image sensor for industrial applications, 29
Industrial imaging
random addressable CMOS image sensor for industrial applications, 29
Integrated circuit fabrication
integrated circuit fabrication compatible three-mask tungsten process for micromotors and gears, 159
Integrated circuits
integrated-circuit-compatible design and technology of acoustic-wave-based microsensors, 249
Integrated optics
micromechanical cantilever resonators with integrated optical interrogation, 71
Integrated sensors
a linearisation and compensation method for integrated sensors, 95
Interdigital transducer
characteristics of interdigital transducers for mechanical sensing and non-destructive testing, 241

Elsevier Science S.A.

Ion-assisted processes
applicability of Ta/GaAs Schottky photodiodes prepared by ion-assisted processes, 51

Linearisation
a linearisation and compensation method for integrated sensors, 95
Liquid-phase-based microsensors
acoustic wave liquid-phase-based microsensors, 199
Liquid sensors
sensing liquid properties with thickness-shear mode resonators, 209
Lubrication
lubrication of silicon micromechanisms by chemical grafting of long-chain molecules, 77

Mechanical sensing
characteristics of interdigital transducers for mechanical sensing and non-destructive testing, 241
Mechanical sensors
mechanical sensors based on surface acoustic waves, 231
Metrology
metrological characteristics of some strain-gauge high-pressure transducers, 65
Micromachining
a linear electromagnetic accelerometer, 103
Micromechanical structures
adhesive force distribution on microstructures investigated by an atomic force microscope, 153
Micromechanics
micromechanical cantilever resonators with integrated optical interrogation, 71
Micromotors and gears
integrated circuit fabrication compatible three-mask tungsten process for micromotors and gears, 159
Microphones
a review of silicon microphones, 1
Microsensors
acoustic wave thermal sensitivity: temperature sensors and temperature compensation in microsensors, 177
integrated-circuit-compatible design and technology of acoustic-wave-based microsensors, 249

Non-destructive testing
characteristics of interdigital transducers for mechanical sensing and non-destructive testing, 241
Numerical simulation
numerical simulation of a p–n–p–n color sensor for simultaneous color detection, 119

Packaging
a flexible polyimide-based package for silicon sensors, 57
Photodiodes
applicability of Ta/GaAs Schottky photodiodes prepared by ion-assisted processes, 51
Piezoelectric polymers
piezoelectric polymer composite arrays for ultrasonic medical imaging applications, 111
Polyimide
a flexible polyimide-based package for silicon sensors, 57
Polymers
real-time measurement of mass accumulation on filters using acoustic-wave techniques, 45
Polysilicon
electrostatically deflectable polysilicon torsional mirrors, 83

Quartz sensors
transmission-line model for immersed quartz-crystal sensors, 137

Robotics
ultrasonic sensor array for position and rotation estimates of planar surfaces, 37

SAW delay lines
acoustic-wave-based voltage sensors, 183
flow sensors based on surface acoustic waves, 191
SAW gas sensors
an automated SAW gas sensor testing system, 219
Schottky photodiodes
applicability of Ta/GaAs Schottky photodiodes prepared by ion-assisted processes, 51
Silicon
a review of silicon microphones, 1
Silicon micromechanisms
lubrication of silicon micromechanisms by chemical grafting of long-chain molecules, 77
Silicon pressure sensors
finite-element analysis of thermal stresses in a silicon pressure sensor for various die-mount materials, 145
Silicon sensors
a flexible polyimide-based package for silicon sensors, 57
Solid-electrolyte cells
use of solid-electrolyte cell as an active low-temperature sensor, 25
Strain gauges
metrological characteristics of some strain-gauge high-pressure transducers, 65
Surface acoustic waves
mechanical sensors based on surface acoustic waves, 231
characteristics of interdigital transducers for mechanical sensing and non-destructive testing, 241

Tantalum
applicability of Ta/GaAs Schottky photodiodes prepared by ion-assisted processes, 51
Temperature sensors
use of solid-electrolyte cell as an active low-temperature sensor, 25
acoustic wave thermal sensitivity: temperature sensors and temperature compensation in microsensors, 177
Thermal disturbances
ultrasonic signal variations caused by thermal disturbances, 131
Thermal stresses
finite-element analysis of thermal stresses in a silicon pressure sensor for various die-mount materials, 145
Thickness-shear mode resonators
sensing liquid properties with thickness-shear mode resonators, 209
Torsional mirrors
electrostatically deflectable polysilicon torsional mirrors, 83
Transmission-line model
transmission-line model for immersed quartz-crystal sensors, 137
Tungsten processes
integrated circuit fabrication compatible three-mask tungsten process for micromotors and gears, 159

Ultrasonic imaging
piezoelectric polymer composite arrays for ultrasonic medical imaging applications, 111

Ultrasonic sensors
ultrasonic sensor array for position and rotation estimates of planar surfaces, 37
ultrasonic signal variations caused by thermal disturbances, 131

Vector sensors
full additive drift elimination in vector sensors using the alternating direction method (ADM), 13

Voltage sensors
acoustic-wave-based voltage sensors, 183
